

IN THE CLAIM:

1. (Original) A watch movement with hand display, including mobile elements, intended to receive the hour and minute hands of the current time, mounted so as to pivot about a first axis arranged substantially at the centre of the movement and four mobile elements intended to receive hands for displaying complementary functions, wherein the four mobile elements are
5 mounted so as to pivot on the movement about second, third, fourth and fifth axes arranged on a straight line which is perpendicular to them.

2. (Original) A movement according to claim 1, wherein the second and fifth axes form, with the first axis the apex of an isosceles triangle whose base rests on said straight line, the angle at the apex being comprised between 120° and 180° .

3. (Original) A movement according to claim 2, wherein said straight line passes below a line passing from 3 to 9 o'clock, through the centre of the movement.

4. (Previously Presented) A movement according to claim 2, wherein the angle at the apex is substantially equal to 140° .

5. (Previously Presented) A movement according to claim 1, wherein said movement is of the chronograph type and includes a mobile element intended to carry a measured time seconds hand concentric to said hour and minute hands, and wherein, among said four mobile

elements, three of them are intended to display respectively the minute and the hour of the
5 measured time and the seconds of the current time.

6. (Original) A movement according to claim 5, wherein the fourth mobile element is intended to display the 24 hours of the day.

7. (Previously Presented) A movement according to claim 1, including a plate intended to carry its different components, and wherein said four mobile elements are arranged on a module, itself mounted on the plate, each of the four mobile elements being kinematically connected to a mobile element pivoting in the plate.

8. (Previously Presented) A movement according to claim 3, wherein the angle at the apex is substantially equal to 140° .

9. (Canceled)

10. (Previously Presented) A movement according to claim 3, wherein said movement is of the chronograph type and includes a mobile element intended to carry a measured time seconds hand concentric to said hour and minute hands, and wherein, among said four mobile elements, three of them are intended to display respectively the minute and the hour of the
5 measured time and the seconds of the current time.

11. (Previously Presented) A movement according to claim 4, wherein said movement is of the chronograph type and includes a mobile element intended to carry a measured time seconds hand concentric to said hour and minute hands, and wherein, among said four mobile elements, three of them are intended to display respectively the minute and the hour of the measured time and the seconds of the current time.

5

12. (Canceled)

13. (Previously Presented) A movement according to claim 3, including a plate intended to carry its different components, and wherein said four mobile elements are arranged on a module, itself mounted on the plate, each of the four mobile elements being kinematically connected to a mobile element pivoting in the plate.

14. (Previously Presented) A movement according to claim 4, including a plate intended to carry its different components, and wherein said four mobile elements are arranged on a module, itself mounted on the plate, each of the four mobile elements being kinematically connected to a mobile element pivoting in the plate.

15. (Previously Presented) A movement according to claim 5, including a plate intended to carry its different components, and wherein said four mobile elements are arranged on a

module, itself mounted on the plate, each of the four mobile elements being kinematically connected to a mobile element pivoting in the plate.

16. (Previously Presented) A movement according to claim 6, including a plate intended to carry its different components, and wherein said four mobile elements are arranged on a module, itself mounted on the plate, each of the four mobile elements being kinematically connected to a mobile element pivoting in the plate.

17. (Currently Amended) A watch movement comprising:

a dial;

a main axis arranged substantially perpendicular to said dial;

a current hour hand pivotally mounted on said dial to rotate about said first axis;

5 a current minute hand pivotally mounted on said dial to also rotate about said first axis;

a plurality of aligned axes arranged substantially perpendicular to said dial and arranged along a substantially straight line passing substantially perpendicularly through said plurality of aligned axes;

a plurality of additional hands each pivoting around one of said plurality of aligned axes,

10 wherein a measured seconds hand pivots around said main axis, a first of said additional hands displays current seconds, a second of said additional hands displays measured minutes and a third of said additional hands displays measured hours.

18 - 19. (Canceled)

20. (Currently Amended) A movement according to claim ~~[[19]]~~ 17, wherein:
a fourth of said additional hands displays 24 hour current time.

21 - 22 . (Canceled)
